

INSIDE ANIMAL CELLS

Connect each cell organelle to its corresponding function by drawing a line.

MITOCHONDRIA

Controls what enters and leaves the cell; gives protection and shape.

RIBOSOME

Controls all cell activities; contains DNA.

NUCLEUS

Make proteins for the cell.

CELL MEMBRANE

Jelly-like fluid that holds organelles and supports reactions.

CYTOPLASM

Powerhouse of the cell; releases energy.

INSIDE ANIMAL CELLS

Connect each cell organelle to its corresponding function by drawing a line.
